The gravity model of international trade in international economics is a model that, in its traditional form, predicts bilateral trade flows based on the economic sizes (often using GDP measurements) and distance between two units.. The model was first introduced in economics world by Walter Isard in 1954. The basic model for trade between two countries (i and j) takes the form of

Physiologically based pharmacokinetic (PBPK) modeling is a mathematical modeling technique for predicting the absorption, distribution, metabolism and excretion (ADME) of synthetic or natural chemical substances in humans and other animal species. PBPK modeling is used in pharmaceutical research and drug development, and in health risk assessment for cosmetics or general chemicals.

Highlights First study to explore the empirical relationship between Canada's Indian residential school and pathways of risk for suicide. Canada's residential school, experienced individually or multigenerationally, predicated a history of abuse. This exposure and having a history of abuse was associated with a history of suicide thoughts and attempts.

Computational detection and understanding of empathy is an important factor in advancing human-computer interaction. Yet to date, textbased empathy prediction has the following major limitations: It underestimates the psychological complexity of the phenomenon, adheres to a weak notion of ground truth where empathic states are ascribed by third parties, and lacks a shared corpus.
