Complexity characterises the behaviour of a system or model whose components interact in multiple ways and follow local rules, meaning there is no reasonable higher instruction to define the various possible interactions.. The term is generally used to characterize something with many parts where those parts interact with each other in multiple ways, culminating in a higher order of emergence ...

This is quite consistent with what we have found, over the years. For many client competency research projects, we find that a 'success formula' specifying excellence in a certain number of competencies, perhaps spread over a few 'clusters' of related or substitutable competencies consistently predicts success.

The g factor (also known as general intelligence, general mental ability or general intelligence factor) is a construct developed in psychometric investigations of cognitive abilities and human intelligence; it is often said to be the most important construct to intelligence, even as no-one in the field says it is all there is to it. It's a variable that summarizes positive correlations among ...
