A field-programmable gate array (FPGA) is an integrated circuit designed to be configured by a customer or a designer after manufacturing – hence the term "field-programmable". The FPGA configuration is generally specified using a hardware description language (HDL), similar to that used for an application-specific integrated circuit (ASIC). Circuit diagrams were previously used to specify ...

A programmable logic device (PLD) is an electronic component used to build reconfigurable digital circuits. Unlike a logic gate, which has a fixed function, a PLD has an undefined function at the time of manufacture. Before the PLD can be used in a circuit it must be programmed, that is, reconfigured.

A programmable logic controller (PLC) is an industrial solid-state computer that monitors inputs and outputs, and makes logic-based decisions for automated processes or machines.

Engineering Essentials: What Is a Programmable Logic

DirectLOGIC series PLCs are available in fixed I/O (brick) and modular, rack-based models with a common programming platform. Most components are compatible with existing installations under the DirectLOGIC name as well as legacy private-labeled models from GE, TI, and Siemens.

Een field-programmable gate array (FPGA) is een geïntegreerde schakeling bestaande uit programmeerbare logische componenten. Deze logische componenten kunnen geprogrammeerd worden als logische functies zoals AND, XOR enzovoorts. Deze functies kunnen bijvoorbeeld decoders of eenvoudige wiskundige functies zijn. In het merendeel van de FPGA's kan men ook logische elementen terugvinden in de ...
