Biomechanics is the study of the structure and function of the mechanical aspects of biological systems, at any level from whole organisms to organs, cells and cell organelles, using the methods of mechanics.

Definition. If  $V$  is the fluid velocity on a small element of a defined curve, and  $dl$  is a vector representing the differential length of that small element, the contribution of that differential length to circulation is  $d\Gamma = \hat{a} \cdot V \hat{a} \cdot dl$  where  $\hat{a}$  is the angle between the vectors  $V$  and  $dl$ . The circulation around a closed curve  $C$  is the line integral:  $\Gamma = \oint_C \hat{a} \cdot V \hat{a} \cdot dl$  ...

The subject of most of this book is the quantum mechanics of systems which have a small number of degrees of freedom. This book is a mix of descriptions of quantum mechanics itself, the general properties of systems described by quantum mechanics, and general techniques for describing their behavior.

### **Journal of Applied and Computational Mechanics (JACM)**

Multibody System Dynamics provides a unique single vehicle for reporting significant developments in all areas of multibody system dynamics. The journal explores theoretical and computational methods in rigid and flexible multibody systems, their applications, and experimental procedures used to validate the theoretical foundations.
